

Trade Together

PADO

The self-custodial financial platform where
community lives inside.

\$110B in Korean Crypto Capital Has No On-Chain Home

- 16M+ crypto users – 30% of Korea's population
- Crypto holders now outnumber stock traders
- \$110B migrated offshore (2025) – domestic exchanges are custodial
- Corporate crypto trading ban lifted February 2026
- DeFi market: 46%+ CAGR through 2032

TRADING INTO AN E-SPORT**

NEWS

Two Bad Choices

CEX

- Custody risk – FTX: \$8B vanished
- Opaque risk management
- No ownership and no governance

Fragmented DeFi

- Multiple wallets, bridge hops, locked collateral
- Information silos: Alpha is shared on X/Discord; execution happens elsewhere

The problem:
Fragmentation of Capital AND Context.

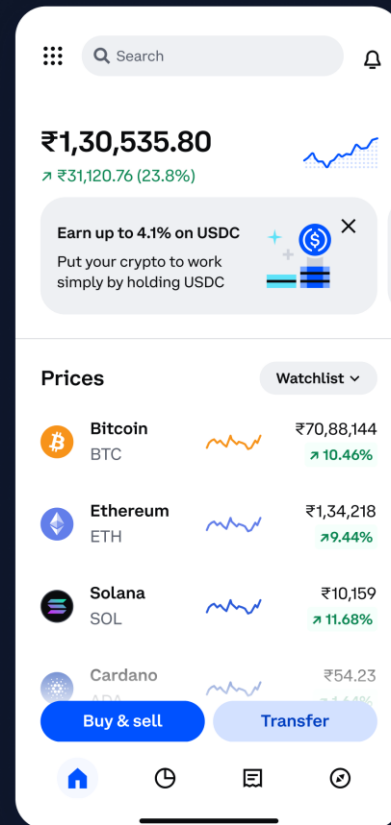

Finance-First Social

SocialFi failed – forced finance into every social interaction.

Pado inverts the model:

- **Finance is the reason to come** – real markets, real risk
- **Community is the reason to stay** – chat, leaderboards, competitions

No feed. No followers. No likes. Just markets and the people in them.

6 Services. 1 Account. Functional on Devnet.

Spot Trading

Full CLOB orderbook, client-side/server-side conditional order (Live)

Prediction Markets

YES/NO outcome orderbooks. Admin-resolved settlement (Live)

Also Live: Lottery • Social (Chat) • zkLogin & Passkey Onboarding

Alpha Deployed: Perps • Leaderboard

Planned: Lending & Staking • Intent-based Execution Layer • Protocol-level Conditional Order

One unified margin. Every asset works harder.

Built, Not Promised

Live in Alpha: Validating core logic through active iteration.

Live Chat

Embedded in trading UI. Trade identity = chat identity.

Leaderboard

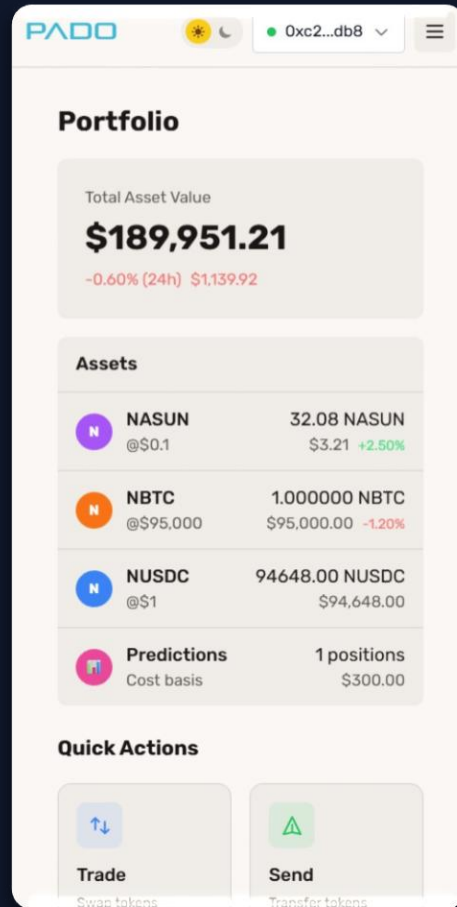

On-chain data. Verifiable rankings.

News Feed

Real-time crypto news. Discuss and trade without leaving the app.

AI Market Narrator + PnL Share

Price alerts + one-click social cards

Nasun: Purpose-Built L1

Object-Based State — Every asset is an independent on-chain object

- **Parallel Execution** — No contention between independent transactions
- **DAG Consensus** — Sub-second finality, reduced MEV
- **Protocol Control** — We own the validators. Conditional orders native.
- **Onboarding:** zkLogin (Google OAuth) • Passkey (Face ID) • Social Recovery

One Account. One Margin Pool.

Traditional DeFi

- Collateral: locked per protocol
- Risk: per-position
- Efficiency: low

VS

Pado

- Collateral: shared across all products
- Risk: portfolio-level
- Efficiency: high (cross-product)

Multi-collateral: NUSDC (100%) + NBTC (95%)
4-tier risk: IM 10% → Warning 8% → MM 5% → FC 3%

The Beachhead: Korea

Users

16M accounts. Highest per-capita adoption globally.

Demand

\$110B offshore. No self-custodial venue domestically.

Regulation

Framework forming. Targeting Korean registration to capture institutional flow.

Culture

K-Content communities already exhibit Web3 participation behaviors.

**Entry: VASP-compliant spot gateway • KOL partnerships •
Cultural events • Progressive DeFi education**

Competitive Position

CEX

Centralized custody • Broad products • Siloed margin • External social • Email/KYC

Fragmented DeFi

Self-custody • Single-purpose • No margin • No social • Seed phrase

Pado

Self-custody • 6 services in 1 account • Unified margin • Native social • zkLogin & Passkey

Three Verticals. One Flywheel.

Nasun Ecosystem

Pado

Trading fees, lending
spread, lottery &
prediction treasury

Baram

Per-attestation fees at
scale, executor staking
requirement

Gen Sol

NFT sales, IP licensing,
in-game economy

One wallet. One token. Reputation non-portable.

Pado users → Gen Sol → Baram → NSN utility compounds.

Roadmap

Phase 1 – Community (2026)

Public testnet • Chat + leaderboard • KOL partnerships • NFT launch • Regulatory roadmap.

Phase 2 – Depth (2026–27)

Perp + lending UI • Secure messaging & war rooms • Partnerships • Establish Korean legal entity

Phase 3 – Scale (2027+)

AI agents • Cross-chain vaults • Copy trading • Global expansion • Mainnet • Security audits • ISMS-P & VASP

Milestones (Pre-Seed)

500 WAW / 60 Days • 50K trades / 90 days • Security audits complete • Seed round open

Team

Naru – Protocol Lead

Built Nasun L1, Pado, Baram. 10yr Korean film (Cannes/Berlin/Venice). First author of a peer-reviewed SCIE journal article in mental health. Crypto builder since 2022.

Overclocked – Ecosystem Lead

Built SPECTRA (UE5/C++/AWS). Gen Sol IP author. Director & writer of theatrically released films. 20yr media production (Microsoft, Nike, IBM). Crypto since 2017.

2 founders • \$0 funding

L1 + full DeFi suite + UE5 shooter + AI compliance layer

10 Korean government grants

Pre-Seed: \$1.5M

- **Security Audits** – \$150K
- **Engineers** – 2 Network/DeFi + 1 C++ Game – \$380K
- **Validators** – \$75K • Legal & Regulatory – \$100K
- **Marketing** – \$150K • Testnet Portal \$100K • Buffer \$20K

Pre-Seed → Seed (milestones proven) → Series A (live mainnet)

No team tokens at TGE. Milestone-based unlocks only.

Trade Together.

Self-custody. Unified margin. Native social layer.

Devnet and 4 services operational. 2 builders. \$0 funding.
\$110B opportunity — no one is building for it on-chain.

We are not asking you to fund an idea.
We are asking you to scale something already running.
